#### **RESEARCH INTERESTS**

Initially Dr Spyridaki has studied the:

- molecular detection, identification and isolation of *Coxiella burnetii* from ticks and blood human
- in vitro susceptibility of *C. burnetii* strains to antibiotics and
- In vitro resistance of *C. burnetii* to quinolones.

From 2015 the research interests of Dr Spyridaki have been focused on matrix pathobiology, especially the study of the role of matrix molecules in disease, including the propagation and progression of cancer and inflammation.
